

Same 1024 positions. Different compiler boundaries.

Whole consumer

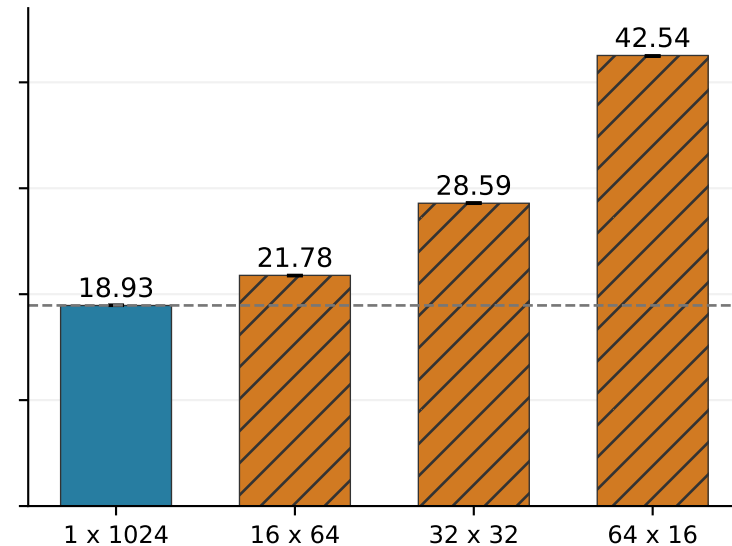

All tested outputs match original bits

Cut after normalization

Split anchor matches; original bits FAIL

Reshape inside one graph

Only 1 x 1024 matches original bits

Dashed line: original consumer. Cut timing includes prefix + MLP calls. Hatched bars fail original-bit parity.
Six per-image medians and min/max; not whole vision/policy acceleration or task quality.
